BEST TYPE OF INSULATION FOR NEW CONSTRUCTION

BATT INSULATION

Commonly installed: basement ceilings, exterior walls, interior walls, floors, attics.

More affordable but less performance.

BLOWN-IN INSULATION

Commonly installed in attics. Not recommended without an air-seal.

DENSE PACK INSULATION

Commonly installed in interior and exterior walls. More effective than batt, but more expensive as well.

SPRAY FOAM INSULATION

Commonly installed in basements, exterior walls, attics, crawl spaces, foundations, and in-between floors.

More expensive, but best performance.
