CAN I PUT A DEHUMIDIFIER IN MY CRAWL SPACE WITHOUT ENCAPSULATION?

In theory, you can put a dehumidifier in your vented crawl space. However, **it will not create the results you're looking for.**

Without encapsulation, the environment is not manageable for the dehumidifier.

Encapsulation is pricier than a dehumidifier, but there are benefits:

- Permanent & lowers energy costs
- Increases resale value
- Solves root problems
- Dehumidifier may not be needed
