CAN YOU INSTALL SPRAY FOAM YOURSELF?

Yes, you can install spray foam yourself. But should you?

DIY spray foam kits are usually not recommended for these reasons:

- Don't save money on big projects.
- Don't provide vital equipment to monitor the chemical reaction.
- Don't include necessary PPE.
- DIY foam is more likely to fail and is a pain to clean up when it does.
- Isn't insured.

Unless the project is small, DIY foam can be a waste of time and money.
