CAN YOU SPRAY FOAM BEHIND DRYWALL?

Drywall presents accessibility issues for most insulation products.

- No easy access to the cavity
- View of the cavity is obstructed

Spray foam cannot be installed behind drywall for 2 reasons:

- Existing insulation must be removed
- Drywall obstructs spray technique

Instead, you can insulate more accessible areas with spray foam (attic, basement, crawl space).

Or, if your walls have no existing insulation, consider injection foam.
