CAN YOU USE SPRAY FOAM AROUND WATER PIPES?

Spray foam is installed **on** and **around** water pipes.

Spray foam does not harm pipes.

If a pipe is “in the way” of spray foam when spraying, the pipe is encapsulated.

Otherwise, pipes are sprayed around. Overspray on the pipe is not harmful.

Pipes should never be installed in an exterior wall directly against the exterior sheathing. This could cause the pipe to freeze, and partial insulation could worsen the problem.
