DO CONCRETE BASEMENT WALLS NEED INSULATION?

Your basement is part of your thermal envelope and requires high-performing insulation.

Basements also need insulation to meet building codes. **You need insulation in either your basement ceiling or your basement walls.**

If you plan to finish your basement, you'll need wall insulation and a wood-frame wall to hang drywall.

Don't want to finish the basement? Insulate directly against the walls with closed cell spray foam or fiberglass blankets.
