## DOES PEST CONTROL INSULATION WORK?

### **PEST CONTROL INSULATION IS JUST INSULATION.**

- Same ingredients and additives as other blown-in products to deter insects and nesting rodents.

### **INSULATION ALONE WILL NOT SOLVE PEST PROBLEMS.**

Pest control insulation can work, but keep these things in mind:

1. Branded pest control insulation is not the only blown-in with borate additives.
2. Your pest control solution may be more unique due to the design of your home.

When purchasing insulation, the primary goal is to insulate. Choose an insulation that contributes best to both your pest control and your energy efficiency.
