## DOES SPRAY FOAM NEED TO BE COVERED?

### **SPRAY FOAM CANNOT BE EXPOSED WITHOUT A PROTECTIVE COVERING.**

Spray foam insulation cannot be exposed to UV rays, or it will break down over time.

- Exterior applications are covered in protective coatings (roofing).
- Interior applications are covered with drywall or coatings.

### **BUILDING CODES ALSO DICTATE THERMAL BARRIERS.**

Spray foam always needs a thermal barrier between itself and an occupiable living space.

Even if visibly exposed, spray foam is still covered with an intumescent coating.
