at a glance

HOW SOON CAN YOU GO HOME AFTER SPRAY FOAM?

YOU MUST LEAVE WHILE SPRAY FOAM IS INSTALLED.

Spray foam insulation off-gasses during manufacturing. This is a normal and expected byproduct. However, these fumes should not be inhaled.

After spray foam has cured, the off-gassing fumes will have dissipated and it is safe to return home. **12 to 24 hours after spray foam insulation is installed, you should be able to return home.**
