## HOW TO INSULATE A CRAWL SPACE

Functional crawl space insulation must do one of these things:

- Make the crawl space clean & dry
- Cut off the crawl space from the living space

The goal is to prevent dirty crawl space air from entering your home, either by cleaning the air (encapsulation) or stopping its transfer (spray foam in the ceiling).

### **DO NOT USE FIBERGLASS BATTS.**

Fiberglass batts allow air to exchange. With fiberglass, dirty crawl space air still exchanges with your living space.
