## HOW TO MAKE YOUR HOME WARMER IN WINTER

### **HOUSE IS COLD? AIR IS PROBABLY LEAKING!**

- If cold air can infiltrate, it's hard to retain heat.

### **AIR MIGHT LEAK AROUND YOUR DOORS & WINDOWS.**

- Temporary solution: foam board in your windows.
- Budget-friendly solution: can foam or caulking.
- Permanent solution: energy-efficient windows.

### **AIR MAY LEAK THROUGH YOUR THERMAL ENVELOPE.**

- Budget-friendly fix: blown-in insulation on your attic floor.
- More permanent fixes: spray foam insulation in the attic or crawl space.

### **YOUR HVAC MAY STRUGGLE TO PRODUCE WARMER AIR.**

- System might be outdated.
- System might need to be resized.

### **WHAT DO I DO FIRST?**

- Always insulate before resizing your HVAC.
- Get a home energy audit to choose your first home upgrade.
