## HOW TO PROPERLY VENT A BATHROOM FAN

Vents should be directed outside of your home.

Unfortunately, many bathroom fans exhaust to the attic.

- Moisture is directed into the roof, rather than the humid bathroom air exiting via the roof or soffits.

Before investing in HVAC equipment to process moisture in your home, verify where vents are terminating.

If you are not a handy homeowner, you can hire a qualified HVAC contractor, electrician, or handyman to take care of your vents.
