IS SPRAY FOAM INSULATION AIR IMPERMEABLE?

Because spray foam is spray-applied, it can create an airtight seal.

Any gaps or cracks in that surface have spray foam essentially glued to them.

AIR PERMEABILITY IS A SPECTRUM.

Manufacturers measure the permeability of spray foam products. Spray foam insulation is only air-impermeable when installed right.

- Closed cell: 1 inch
- Open cell: 3.5 inches

Spray foam isn't going anywhere, so its air barrier is permanent, too.
