## IS SPRAY FOAM INSULATION SAFE TO BREATHE?

### WHEN NOT TO BREATHE AROUND SPRAY FOAM INSULATION

- During manufacturing
- If the foam is unstable

During manufacturing, residents and pets are asked to vacate. The installer wears a fresh air respirator system to protect their lungs while spraying. The off-gassing byproduct of the chemical reaction ceases after 24 hours.

Unstable foam may off-gas indefinitely, which is why spray foam should always be installed by a qualified contractor.
