

at a glance

SPRAY FOAM vs. BLOWN-IN FIBERGLASS

MATERIALS

Blown-in fiberglass is made of fine glass and plastic particles. Spray foam is a plastic polyurethane foam.

VERSATILITY

Blown-in fiberglass can only be used in attic applications. Spray foam can be used almost anywhere.

COST

Blown-in fiberglass is more affordable than spray foam insulation.

PERFORMANCE

Spray foam offers more performance than blown-in, including an air-seal.
