

at a glance

WHAT IS A HYBRID INSULATION SYSTEM?

Like flash and batt, a hybrid system combines closed cell spray foam with batt insulation.

For ceilings, a hybrid system combines spray foam and blown-in insulation.

- A hybrid system uses 2 inches of closed cell, not 1 inch.

BENEFITS OF HYBRID SYSTEMS

Hybrid systems offer:

- an air barrier
- a vapor barrier
- necessary R-value

All of this is accomplished at a lower cost than with spray foam alone.
