WHAT IS SPRAY FOAM INSULATION?

Spray foam insulation is polyurethane foam. Two liquid chemical components (A-Side and B-Side) undergo a chemical reaction to create this plastic foam.

Spray foam has two types: open cell and closed cell. They have different densities and application options.

WHY USE SPRAY FOAM?

- High, long-lasting R-value
- Resist all 3 forms of heat transfer
- Versatility for many project types
- Flexible spray-application
