WHICH BLOWN-IN INSULATION IS BEST FOR ATTICS

TWO COMMON TYPES OF BLOWN-IN

- Blown-in fiberglass
- Blown-in cellulose

BOTH OFFER COMPARABLE PERFORMANCE FOR ATTICS

Even though fiberglass and cellulose have similar performance, we recommend blown-in cellulose.

Blown-in cellulose is made of paper, not glass, so it is safer to touch and interact with.

No matter which blown-in you choose, consider pairing it with an airtight seal.

An air-seal will maximize the insulation performance.
