at a glance

WHY DOES MY CENTRAL AIR RUN ALL DAY?

FIRST: IS YOUR INSULATION PERFORMING AT ITS HIGHEST POTENTIAL?

The better your insulation, the fewer BTUs will be needed to condition your home. You may need new or better insulation to support your HVAC.

SECOND: HAVE TEMPERATURES BEEN HIGH FOR SEVERAL DAYS?

Even the best systems will work really hard in the face of high temperatures. It is not abnormal for your system to run all day when temperatures are so hot.

FIXING YOUR AC DOESN'T MEAN SIZING UP YOUR SYSTEM.

- Insulation should be upgraded first.
- Ductwork size will restrict the efficiency of an AC upgrade (airflow distribution).
