

at a glance

WHY DOES MY HOUSE SMELL MUSTY?

A musty smell is almost always an indicator of unmanaged moisture.

This odor may indicate mold or mildew, but you *must* test your air.

Consider working with a local mold remediation company to test your air.

Once you've established the presence of mold, you can identify the source of the moisture.

COMMON INFILTRATION SOURCES

- Window flashing / siding
- Roofs
- Basements / crawl spaces
- HVAC systems
