

at a glance

WHY DOES SPRAY FOAM CHANGE COLOR?

SPRAY FOAM IS CREATED THROUGH A CHEMICAL REACTION.

- Before spraying: color of motor oil
- During cream time: yellow or tan color
- During rise time: creamy-white color

SOME SPRAY FOAM PRODUCTS ARE DYED FUN COLORS.

Depending on the manufacturer, spray foam insulation might be dyed:

- Purple
- Green
- Blue

The natural color of foam is cream, with the hue depending on the manufacturer.

SPRAY FOAM MAY YELLOW OVER TIME IF EXPOSED TO SUNLIGHT.
