WHY NOT TO INSTALL FIBERGLASS IN A CRAWL SPACE

There are many reasons why fiberglass isn't ideal for a crawl space.

- Can't handle moisture content
- Absorbs moisture
- Falls out of the ceiling
- Can't create an effective barrier
- Ideal for rodents to nest in

Fiberglass was not designed for below-grade applications like crawl spaces.

We recommend encapsulation as an alternative to fiberglass. That method will address the root moisture concerns in the crawl space.
