WHY WE SOMETIMES DON'T RECOMMEND BATT INSULATION IN EXTERIOR WALLS

FIBERGLASS BATT INSULATION OFFERS MEDIOCRE PERFORMANCE.

Fiberglass is an affordable insulation. However, it offers a budget performance.

- Varying batt sizes
- Lack of air barrier
- Moisture absorption

Batts don't always fit in the cavity. The widths can vary and leave gaps.

Fiberglass insulates by allowing air to pass through, which also lets heat transfer.

Fiberglass can absorb moisture, making it a poor choice for below-grade applications (crawl spaces, basement walls).
